DOMINATE SOIL & FOLIAGE WITH PP9 MICROBES

μInoculant PP9: Ensures the foliage and soil in your orchard is dominated by the beneficial bacteria *Pseudomonas putida* which is predominant in healthy soils.

Benefits:

- Produces a range of anti-microbial compounds.
- Biologically active at low temperatures.
- *Pseudomonas putida* is a well known metaboliser of complex and toxic chemicals.
- Can be mixed and applied with BioStart Digester, Mycorrcin, Elicyon, Foliacin and the herbicide Glyphosate.

For specific crop recommendations contact your local BioStart representative.

Pack sizes available: 250ml

μ INOCULATE PP9

	Rate	Timing
Soil	50ml/ha	Apply directly to orchard floor. Minimum water rate 200L/ha
Foliage	50ml/ha	Apply directly to foliage at 18 to 21 days maximum from bud break to harvest. Minimum water rate 200L/ha
