

Applying **Organic HayKing** at baling helps inhibit the microbes responsible for decomposition and spoilage, aiding in the preservation of hay and straw and thereby improving storage and palatability.

Directions for use: Accurately measure the moisture content of high moisture hay before baling using either a moisture meter or carry out a microwave test. Do not use **Organic HayKing** if moisture levels exceed 24%. Apply the correct amount of **Organic HayKing** according to moisture content and bale weight using the table below.

Organic HayKing Application Rate:	Moisture Content of Hay		
	18%	21%	24%
Per tonne (1,000kg) rate	300 mL/T	470 mL/T	670 mL/T
Conventional small bales (~35 kg)	15 mL/bale	20 mL/bale	25 mL/bale

Handling precautions: When mixing or applying **Organic HayKing**, avoid contact with skin and eyes. Wear protective clothing, gloves and goggles. Do not eat or drink while using. Wash hands and face before meals and after work. Wash protective clothing after use. Flush applicator thoroughly with water after use.

Product storage: Store out of direct sunlight and below 30°C, otherwise product efficacy may be affected.

Disclaimer: As BioStart Limited has no control over use, handling and storage of this product, no express or implied representations or warranty (other than non-excludable warranties) are made. It is the buyer or user's responsibility to store, handle and use the product in accordance with our label instructions and in conjunction with good hay making and storage practices.
