

Ruminant

Benefits Sheet

Prebiotic digestion enhancer for rumen health under stress.

BioStart Ruminant is a digestive enhancer for sheep, post-weaning calves, pre-calving heifers and cattle to aid digestive efficiency and animal well-being especially through periods of stress such as feed change, weaning, transport and climatic stress. Ruminant contains the non-viable ferment of specially-selected beneficial bacteria, prebiotics, vitamins, minerals and trace elements.

How does Ruminant work?

BioStart Ruminant promotes a healthy rumen in conjunction with good management practices will lead to healthier animals and help improve digestive efficiency, nutrient conversion and animal production.

Active ingredient: A concentrated blend of non-viable extracts from the fermentation of: *Lactobacillus acidophilus*, *Bifidobacterium animalis*, *Streptococcus thermophilus*, *Lactobacillus casei*, *Enterococcus faecium*, *Propionibacterium freudenreichii*.

The Benefits of using BioStart Ruminant

- Optimise rumen health and function at times of stress
- Reduce digestive stress from feed change heavy grain feeding, climatic stress and transport
- Improve animal production • Improve animal well-being
- Higher lambing and calving percentages

Directions for use

Dose Ruminant through the trough dispenser, co-administer with oral supplements via drenching, or dilute and spray over supplementary feed at the equivalent recommended rate.

Sheep	Dosage Rate	Application
Lambs:	2 ml /head	at marking
	4 mL /head	at weaning and prior to feed changes and transport
Ewes/Hoggets/Rams:	4 mL /head	prior to feed changes, mating and transport
Merinos:	4 mL /head	prior to feed changes, mating and transport

Beef	Dosage Rate	Application
Calves:	10 mL /head	at weaning and prior to feed changes and transport
Cattle:	20 mL /head	prior to feed changes, mating and transport

For both sheep & cattle dose during climatic events or if there are animal health issues.

Pack sizes available: 2, 5, 10 and 20 litre
