Refrigerate prior to application. Once the bottle is opened use within 24 hours.

**Keep out of reach of children.**

**Keep container tightly closed.**

**Do not store diluted product.**

## Empty container disposal:

Triple rinse and return to approved recycling centre.

## BioShield Lawn Care is a biological control agent for New Zealand grass grub (*Costelytra giveni*) on home lawns.

BioShield contains a live bacterium (*Serratia entomophila*) that causes amber disease in grass grub larvae. Infected larvae die within 1-2 months. BioShield does not affect humans, animals or any other insects.

Check out trials, before & after pics and more!

TO DILUTE:	Mix 10 mL BioShield Lawn Care in 1 L water. 1 L of mixture covers 10m <sup>2</sup> of lawn.
Application Timing	Application
Apply between January and May.	Dilute 10mL of BioShield <sup>®</sup> Lawn Care in 1 L of clean water. 1 L covers 10 m <sup>2</sup> of lawn. Apply diluted BioShield Lawn Care soon after mixing. Use a knapsack sprayer in the late afternoon to recently mown lawn. After application water the lawn for 15 minutes.
<b>Note:</b> BioShield <sup>®</sup> Lawn Care works best when larvae numbers are 100–300 larvae/m <sup>2</sup> . Application of BioShield to lawns with very high larvae populations will not prevent all damage in the season of application.
